

GUI AI Ciclo De Continuo

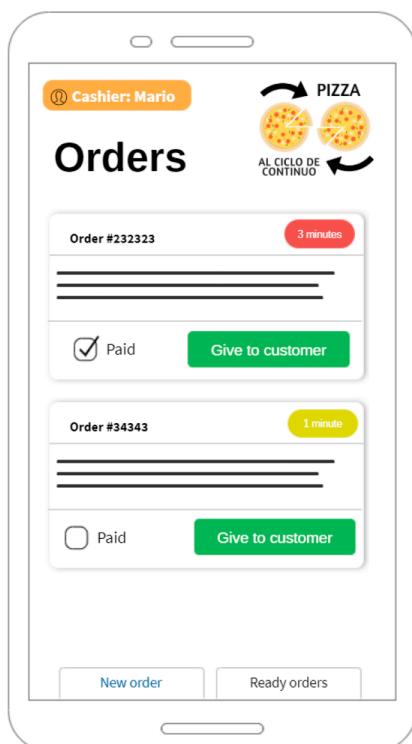

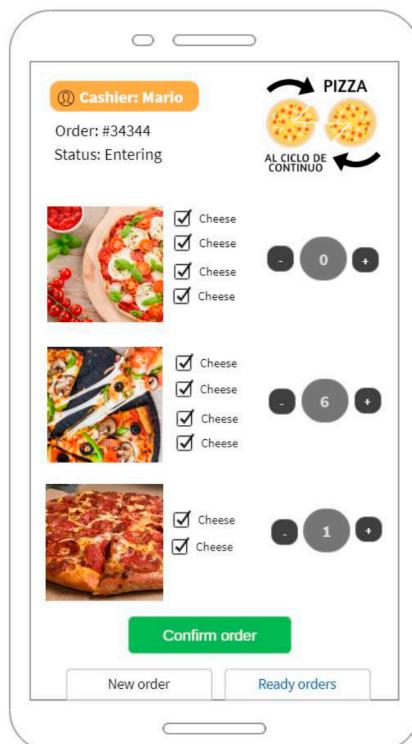

Figure 1 Homepage

Figure 2 Order

Figure 3 Cashier view

Figure 4 Chef view

Key elements

- Basic view listing multiple pizzas. Cashier can select which pizzas and what amount the customer wants
- Basic view which shows the cashier when and which pizzas are ready
- Basic view where chef can add which pizzas are ready

Good to have elements

- In the orders view - how much time has been elapsed by cashier to give the pizza to the customer
- Checkmark if order was paid or not

Possible future implementations

- Improve overall design to be like the pictures now
- Add a login system for the chefs and cashiers
- Select which ingredients the pizza should have
- Use database for holding pizza info and not have it hardcoded into the app
